

QUESTIONS 138-141

STRING METHODS - 2

Q138. Write a program to reverse the order of words.

```
#Example 1
my_string = "Hello World"

#Output
World Hello

#Example 2
my_string="python is good"

#Output
good is python
```

Q139. Write a program that accepts a string and capitalizes the first letter of each word while converting all other letters to lowercase.

```
#Example 1
my_string = "hello WORLD"

#Output
Hello World

#Example 2
my_string="python is good"

#Output
Python Is Good
```

Q140. Write a program that reverses each word in a sentence while maintaining the word order. For example, "**Hello World**" should become

"olleH dlroW".

Q141. Write a program that converts a string in camelCase to snake_case. For example, converting **"helloWorldHowAreYou"** should result in **"hello_world_how_are_you"**. **(Do on your own)**
